

Dear High School Students,

Thales College will form you to be an intelligent, empathetic, moral, and resilient leader. I say leader instead of student because Thales College is not limited to offering a rigorous academic education. There is more to the working world than scholastic theory. That is why at Thales College we are offering real world experiences, one-on-one mentorship, and a college degree.

The Thales College model was carefully crafted with these three aspects in order to maximize individual success. Theoretical knowledge is limited without experiential practice—hence our internship program. Professor lectures have limits without personal investment with students—hence the Oxford tutorial mentorship method. Finally, we understand the certificate of completion is invaluable to employers in today’s job market—hence our transformation of this educational model into two concrete degree tracks.

We are looking for students who have a drive and a passion to make themselves contributors. If you have the ambition, we will help develop the skills, techniques, and knowledge you need to realize your passion and guide you along the way.

My own mentor, William H. Peterson, said he had one primary reason he went to school. He went to school *to learn how to think*. To exercise humanity’s unique gift of rationality is an invaluable skill that you will need throughout your life.

If you are looking to learn how to think and an opportunity to exercise those skills in the real world, I would like to personally invite you to attend Thales College. I can promise you an education that will have you very well prepared for an excellent and successful future.

Kind regards,
